## Professional Summary

Driven 2026 ECE Graduate seeking an entry-level IT role. Proficient in Python, SQL, data analytics (Power BI, Tableau), AI concepts, and front-end development (HTML, CSS, JavaScript). Experienced in building end-to-end analytical pipelines, automating data workflows, and developing responsive web applications. Strong analytical thinker with solid communication skills and a passion for leveraging technology to solve business problems.

## Technical Skills

**Programming Languages:** Python, HTML, CSS, JavaScript, Embedded C, C

**Databases:** SQL, Firebase Realtime Database, Relational Databases

**Dashboards & Analytics:** Power BI, Tableau, NumPy, Pandas, Matplotlib, Data Visualization, Data Analysis

**Tools Used:** VS Code, MySQL, SQLite, Excel, Git & GitHub

**Other Skills:** Artificial Intelligence, Generative AI(Chatgpt, Gemini, Claude), Communication, Problem Solving, Requirements Elicitation, Quality Assurance (QA), Technical Writing, System Design

## Education

**Sreenidhi Institute of Science and Technology, Hyderabad**

*B.Tech in Electronics and Communication Engineering*

**April 2026**

*CGPA: 7.68*

## Experience Summary

**Bluestock Fintech**

**July 2026 – Sep 2026**

*Data Analyst Intern*

**Project 1: Mutual Fund Analytics Platform**

**Tools used:** Python, Pandas, SQL (SQLite), Power BI, Matplotlib

- Designed and implemented an end-to-end ETL pipeline to ingest, clean, and transform 10+ mutual fund datasets into a structured SQLite database.
- Analyzed 30K+ investor transactions to identify SIP trends, state-wise patterns, and transaction behavior insights.
- Developed key performance metrics including CAGR, Sharpe Ratio, Sortino Ratio, Alpha, Beta, and Max Drawdown for fund evaluation.
- Built an interactive Power BI dashboard to visualize AUM trends, top investors, and fund performance with dynamic filters.

**Project 2: Nifty100 Analysis**

**Tools used:** Python, Pandas, SQLite, Excel (XlsxWriter), Data Analysis, Financial Modeling, Data Processing

- Designed and developed an end-to-end financial analytics system to process and analyze Nifty 100 company data using Python and SQLite for structured storage and querying.
- Built a multi-strategy stock screener (Quality, Value, Growth, Dividend, Debt-Free, Turnaround) using rule-based filtering on financial metrics such as ROE, Debt-to-Equity, Free Cash Flow, and CAGR.
- Implemented sector-wise normalization and composite scoring model using winsorization (P10–P90) to generate unbiased company rankings and investment insights.
- Developed a peer comparison engine with multi-factor ranking to evaluate companies within the same sector based on profitability, leverage, and growth performance.

## Academic Projects

**Secure Smart Electronic Voting System using Multi Factor Authentication**

**Tools used:** ESP 32, Firebase, IoT, System Process Design

- Designed multi-factor authentication system processes integrating biometric verification, keypad PINs, and GSM OTP generation.
- Configured Firebase Realtime Database integration for live cloud tracking, enforcing strict verification requirements and single-vote policy.
- Performed end-to-end quality assurance testing and documented complete system flowcharts and technical specs.

**Personal Portfolio Website**

**Tools Used:** HTML, CSS, JavaScript, VS Code, Git & GitHub

- Designed and deployed a responsive personal website showcase featuring projects, analytical dashboards, and system architecture documentation.
- **Link:** <https://malli0208.github.io/MyPortfolio/>

## Certifications

- AWS Data Engineering Virtual Internship (AICTE)
- Cisco CCNA – Introduction to Networks
- Microchip Embedded System Developer
- System Engineer Certification – GyanNidhi Innovations
